Disassembly

1. **NOTE:** The main control valve body separator plate has a bonded gasket. Do not reuse. Discard the plate.

Remove and discard the main control valve body separator plate.

2. Remove the check balls.

3. **NOTE:** Refer to the disassembled view.

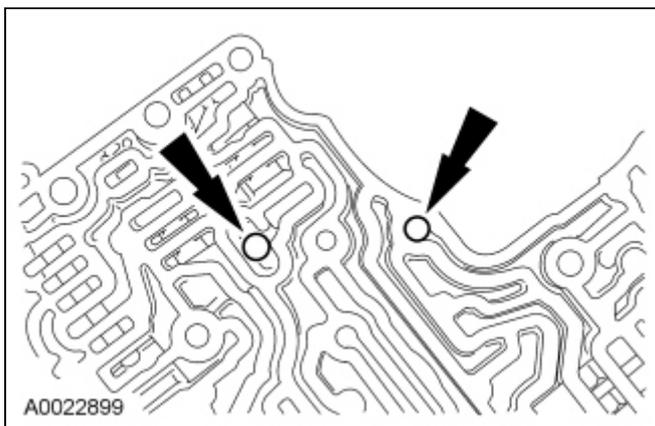

Disassemble the main control valve body only if cleaning is required.

Assembly

1. Thoroughly clean all parts in solvent and blow dry with moisture-free compressed air.
2. **NOTICE: Do not stone, file or sand the valves. This will remove the anodized finish and may result in further main control or transmission damage.**

After cleaning the main control valve body, carry out the following:

- Inspect all valve and plug bores for scoring or burrs.
 - Check all fluid passages for obstructions.
 - Inspect all valves and plugs for burrs.
 - Inspect all mating surfaces for burrs or distortion.
 - Inspect all springs for distortion.
 - Check all valves and plugs for free movement in their respective bores.
 - Valves and plugs, when dry, must fall from their own weight into their respective bores.
 - Roll the manual valve on a flat surface to check for a bent condition.
3. Assemble the main control valve body.
 4. Install the main control valve body check balls.

5. **NOTE:** Use a new main control valve body separator plate for main control valve body installation.

Using the Valve Body Aligners, install a new main control valve body separator plate.

- Tighten to 7 Nm (62 lb-in).
